

Cellivo Functional Requirements Specification

Detailed functional behaviour of the Cellivo phone shop POS platform, including the shop admin dashboard and the platform super-admin dashboard.

Product	Cellivo (cellivo.com)
Publisher	W3Inventor (Pvt) Ltd, Sri Lanka
Document	FRS v1.2 draft (with UI design)
Companion document	Cellivo SRS v1.0
Date	27 September 2026
Status	For review

Table of contents

- 1. Introduction
- 2. System overview
- 3. Functional specifications (F-01 to F-19)
- 4. Platform admin dashboard (A-01 to A-16)
- 5. Status models
- 6. Validation and system messages
- 7. UI design: design system, account portal home (F-20), UX review, screens
- 8. Appendices: notification matrix, traceability to SRS, sign-off

1 Introduction

1.1 Purpose

This Functional Requirements Specification (FRS) explains how each function of Cellivo must work: the screens and fields, the step-by-step process, the business rules and the conditions for acceptance. It expands the "what" of the SRS into the "how it behaves" needed by developers, designers and testers.

1.2 Scope

The FRS covers the account and billing portal, the shop application (including the shop admin dashboard) and the platform admin dashboard. Non-functional requirements (performance, security levels, availability, budget) are in the SRS and are not repeated here.

1.3 How to read each function

Every function has: an ID (F-xx or A-xx); the SRS requirements it satisfies; its purpose; actors; preconditions; a field table (field, type, required, validation); the main process flow; business rules; and acceptance criteria that QA will test.

Basis. Customer-facing features come from cellivo.com. Detailed behaviour, default values (for example trial length, retry days, timeouts) and the whole admin dashboard are proposed defaults and must be confirmed by the product owner.

2 System overview

2.1 Actors

Actor	Main functions
Visitor	Website, sign-up (F-01)
Shop owner	All shop functions, billing (F-02), settings (F-19)
Branch manager	Approvals, transfers, reports for own branches
Cashier	POS sale, returns request, customers, drawer
Technician	Assigned repair jobs, parts usage
Accountant	Finance, suppliers, payroll, reports
End customer	Receives receipts and SMS; repair status page
Platform admin roles	Admin dashboard (A-01 to A-16)
External systems	Payment gateway, SMS gateway, email service, WooCommerce

2.2 Module map and plan availability

Function	Lite	Starter / Growth / Business / Unlimited
F-01 to F-05, F-06, F-08, F-09, F-13, F-14, F-17 (basic), F-18, F-19	Yes	Yes
F-07 IMEI tracking, F-10 returns and wholesale, F-11 credit, F-12 repairs	No	Yes
F-04 custom roles, F-15 staff and payroll, F-17 advanced reports	Limited	Yes
F-16 multi-branch	1 branch	1 / 3 / 6 / unlimited branches

2.3 Main navigation

Dashboard, New sale, Sales (invoices, returns, quotations), Inventory (products, IMEI search, adjustments, stock count, labels), Purchases (orders, GRN, suppliers, supplier payments), Repairs, Customers (profiles, credit, installments, loyalty), Finance (cash drawer, banks, cheques, expenses, income, reconciliation), Staff (users, roles, commissions, shifts, payroll), Branches (list, transfers), Reports, Settings.

3 Functional specifications

F-01 Registration and free trial

Item	Detail
SRS reference	ACC-01 to ACC-04, WEB-04
Purpose	Lets a shop owner create a Cellivo account and start a free trial without a credit card.
Actors	Visitor, System
Preconditions	Visitor selected a plan on the pricing page, or clicked Start Free Trial.

Fields and validation

Field	Type	Required	Validation / notes
Full name	Text	Yes	2–80 characters
Shop name	Text	Yes	2–100 characters; becomes tenant display name
Email	Email	Yes	Valid format; unique across platform
Mobile number	Phone	Yes	E.164 format; country code from country field
Country	Select	Yes	Sets default currency, tax template and time zone
Password	Password	Yes	Min 8 characters, 1 letter, 1 number
Plan code / billing term	Hidden	Yes	Passed from pricing page; default Starter / monthly
Affiliate or coupon code	Text	No	Must exist and be active
Accept terms	Checkbox	Yes	Must be ticked

Process flow

1. Visitor opens the sign-up page with the plan pre-selected.
2. Visitor completes the form and submits.
3. System validates fields and checks email uniqueness.
4. System sends a 6-digit email verification code (valid 15 minutes) and optionally an SMS OTP.
5. Visitor enters the code.
6. System provisions the tenant: default branch "Main Branch", owner user, 5 default roles, tax and currency settings, sample categories, invoice prefix INV-.
7. System starts the trial on the chosen plan and opens the setup wizard (logo, address, first product).

Business rules

- Trial length is set by the platform admin (default 14 days).
- One trial per email, phone number and business registration number.
- If an affiliate code is used, the referral is linked to the tenant for commission.
- Reminder emails are sent 3 days and 1 day before the trial ends.

Acceptance criteria

- A new tenant is usable within 60 seconds of verification.
- A duplicate email shows: "An account with this email already exists. Log in or reset your password."
- No payment details are requested at any point in the trial flow.

F-02 Subscription, payment and plan changes

Item	Detail
SRS reference	ACC-05 to ACC-10
Purpose	Handles plan purchase, renewals, upgrades, downgrades, cancellation and suspension.
Actors	Shop owner, Payment gateway, System
Preconditions	Owner is logged in; only the Owner role can access billing.

Fields and validation

Field	Type	Required	Validation / notes
Plan	Select	Yes	Lite, Starter, Growth, Business (Unlimited via sales)
Billing term	Radio	Yes	Monthly, Yearly, Lifetime
Currency	Select	Yes	USD or LKR
Coupon code	Text	No	Valid, not expired, eligible for plan
Billing name / address / tax number	Text	No	Printed on subscription invoice

Process flow

1. Owner opens Settings > Subscription and selects Upgrade or Choose plan.
2. System shows price, proration credit and amount due today.
3. Owner pays through the hosted payment page.

4. Gateway returns a signed webhook; System marks payment Paid, activates the plan and emails a tax invoice.
5. On renewal date, System charges the saved method automatically.

Business rules

- Upgrades apply immediately with a prorated charge.
- Downgrades apply at the next renewal. If active branches exceed the new limit, the owner must archive branches first.
- Failed renewal: retry on days 1, 3 and 5; email and in-app warning each time.
- After 7 days unpaid (configurable) the tenant is Suspended: login allowed, only Billing screen accessible.
- Cancellation keeps full access until the paid period ends, then read-only for 30 days, then archived. Data is deleted 90 days after archival unless reactivated.
- Lifetime plans never renew; SMS credits are still bought separately.

Acceptance criteria

- Plan-gated modules appear or disappear within 1 minute of a plan change.
- Every payment produces a downloadable PDF invoice.
- A suspended tenant cannot create invoices but can pay and export data.

F-03 Login and account security

Item	Detail
SRS reference	SEC-01 to SEC-03, SEC-06 to SEC-10
Purpose	Authenticates users and protects accounts.
Actors	All shop users, Owner
Preconditions	User account exists and is active.

Fields and validation

Field	Type	Required	Validation / notes
Email or username	Text	Yes	Existing active user
Password	Password	Yes	—
2FA code	6 digits	Conditional	Required when 2FA is enabled or enforced for the role
Remember device	Checkbox	No	Skips 2FA on this device for 30 days

Process flow

1. User enters credentials.
2. System checks IP allow-list, device approval and account lock status.
3. If 2FA applies, System requests the code.
4. System creates a session and opens the user's role dashboard at their default branch.

Business rules

- 5 failed attempts lock the account for 15 minutes and notify the owner.
- Idle sessions expire after 30 minutes (owner can set 10–240).
- Login from an unapproved device (when device control is on) is held until the owner approves it.
- Password reset links expire after 30 minutes and are single use.
- Every login, logout, failure and lock is written to the audit log.

Acceptance criteria

- Owner can view active sessions and log any of them out remotely.
- A blocked IP sees: "Access from this network is not allowed. Contact your shop owner."

F-04 Users, roles and permissions

Item	Detail
SRS reference	SEC-04, SEC-05, HR-01, BR-05
Purpose	Controls what each staff member can see and do.
Actors	Owner, Branch manager (limited)
Preconditions	Plan is Starter or above for custom roles; Lite has Owner and Cashier only.

Fields and validation

Field	Type	Required	Validation / notes
User name / email / phone	Text	Yes	Email unique within tenant
Role	Select	Yes	Default or custom role
Branch access	Multi-select	Yes	At least one branch
Discount limit	Percent	No	0–100; overrides role default
Approval PIN	4–6 digits	Managers	Used to approve overrides at the counter
Status	Toggle	Yes	Active / Inactive

Process flow

1. Owner opens Staff > Users > Add user.
2. System sends an invitation email/SMS with a set-password link (valid 48 hours).
3. Owner creates custom roles in Settings > Roles by ticking View/Create/Edit/Delete/Approve per module.

Business rules

- Special permissions: view cost and margin, override price, approve discount, void invoice, approve return, adjust stock, view all branches, export reports.
- The Owner role cannot be deleted or restricted; a tenant must always have one owner.
- Deactivated users cannot log in but remain on historic records.

Acceptance criteria

- A cashier without "view cost" never sees cost or profit on any screen, report or export.

F-05 Shop dashboard

Item	Detail
SRS reference	DSH-01 to DSH-09
Purpose	Gives owners and managers a live view of sales, stock, repairs and profit.
Actors	Owner, Branch manager; reduced views for Cashier and Technician
Preconditions	User is logged in.

Fields and validation

Field	Type	Required	Validation / notes
Branch filter	Select	Yes	Allowed branches or All
Period	Select	Yes	Today, Yesterday, This week, This month, Custom

Process flow

1. System loads KPI cards: Revenue, Net profit, Margin %, Orders, Phones in stock, Low stock, Repairs pending, Ready for pickup.
2. System loads Revenue vs Profit chart, latest 5 sales, reorder alerts, overdue customer balances, cheques maturing in 7 days, top products and staff leaderboard.
3. Cards refresh in real time when new sales or repairs are saved.

Business rules

- Net profit = sales revenue – cost of goods – commissions – repair parts cost (expenses shown separately in P&L).
- Each KPI shows change vs the previous equal period.
- Cashier dashboard: own sales today, drawer balance, quick New sale. Technician dashboard: assigned jobs by status.

Acceptance criteria

- Clicking any card opens the matching filtered list or report.
- Dashboard loads within 2 seconds for a tenant with 1 year of data.

F-06 Products and inventory

Item	Detail
SRS reference	INV-01, INV-05 to INV-11
Purpose	Maintains the product catalogue and stock quantities for phones, accessories and parts.
Actors	Owner, Manager, Stock staff
Preconditions	Categories and brands exist (defaults provided).

Fields and validation

Field	Type	Required	Validation / notes
Product type	Select	Yes	Phone (IMEI), Serialized item, Quantity item, Spare part, Service
Name / brand / model	Text	Yes	Name unique per variant
Category	Select	Yes	—
Variant attributes	Storage, RAM, colour	No	From master lists
Condition	Select	Phones	New, Used, Refurbished
SKU / barcode	Text	No	Auto-generated if empty; unique
Cost price	Money	Yes	≥ 0
Retail price / wholesale price	Money	Yes / No	$\geq$ cost unless below-cost selling allowed
Tax class	Select	Yes	From tax settings
Reorder level	Integer	No	≥ 0

Field	Type	Required	Validation / notes
Warranty (months)	Integer	No	0–60

Process flow

1. User adds a product or imports a CSV/Excel file.
2. For imports, System shows a preview with row-level errors; only valid rows are imported.
3. Stock is added only through GRN, opening stock, transfer-in, return or adjustment — never by editing the quantity field directly.
4. User prints barcode labels by choosing products, quantity and label size.

Business rules

- Stock adjustments need a reason (Damaged, Lost, Found, Internal use, Count correction) and approval if the value exceeds the approver threshold.
- Quantity items use weighted average cost; IMEI items use their individual purchase cost.
- Low-stock alert fires once when quantity drops to or below the reorder level, and resets after restock.
- Products with history can be archived but not deleted.

Acceptance criteria

- Stock count: scanned quantities are compared with system stock and differences posted as one adjustment document.
- Every stock change appears in the product's movement history with document reference.

F-07 IMEI and serial number tracking

Item	Detail
SRS reference	INV-02 to INV-04, POS-02
Purpose	Tracks every handset individually through its full life.
Actors	All stock and sales users
Preconditions	Plan is Starter or above.

Fields and validation

Field	Type	Required	Validation / notes
IMEI 1	15 digits	Yes for phones	Luhn check; unique among in-stock items

Field	Type	Required	Validation / notes
IMEI 2	15 digits	No	Luhn check
Serial number	Text	Serialized items	Unique per product
Status	System	—	In stock, Reserved, In transit, Sold, Returned, In repair, Returned to supplier, Written off

Process flow

1. IMEIs are captured at GRN, opening stock or trade-in by scanning or typing.
2. At sale, the cashier scans or picks a specific IMEI.
3. User can search any IMEI to see its timeline.

Business rules

- An IMEI with status Sold cannot be sold again until returned.
- An IMEI can re-enter stock (trade-in or buy-back) even if sold before; the timeline keeps both histories.
- Stock locking: selecting an IMEI in a cart reserves it for 15 minutes so another cashier cannot sell it.

Acceptance criteria

- IMEI search returns in under 300 ms.
- Timeline shows supplier, purchase date and cost (permission-gated), transfers, sale invoice, customer, warranty end date, returns and repairs.

F-08 Purchasing, GRN and suppliers

Item	Detail
SRS reference	PUR-01 to PUR-06
Purpose	Records buying from suppliers and what the shop owes them.
Actors	Owner, Manager, Accountant
Preconditions	Supplier exists.

Fields and validation

Field	Type	Required	Validation / notes
Supplier	Select	Yes	Active supplier
Branch	Select	Yes	Receiving branch
Items / qty / unit cost	Lines	Yes	Qty > 0, cost ≥ 0
Expected date	Date	No	—
Supplier invoice no. and date	Text/Date	On GRN	—
IMEI list	Scan	IMEI items	Count must equal quantity received

Process flow

1. User creates a purchase order (Draft) and sends it (Sent) by email or PDF.
2. When goods arrive, user creates a GRN from the PO, enters received quantities and scans IMEIs.
3. System flags differences in quantity or price and requires a note.
4. Posting the GRN adds stock, updates costs and creates a supplier bill in the ledger.
5. User records supplier payments (cash, bank, cheque) against one or more bills.

Business rules

- PO status: Draft → Sent → Partially received → Received → Closed / Cancelled.
- A GRN can be created without a PO (direct purchase).
- Purchase returns remove the selected IMEIs/quantity and create a debit note on the supplier ledger.

Acceptance criteria

- Supplier ledger balance always equals bills – payments – debit notes.
- Supplier payment reminders appear 3 days before due date.

F-09 POS sale

Item	Detail
SRS reference	POS-01 to POS-06, POS-11 to POS-15
Purpose	Creates sales invoices quickly at the counter.
Actors	Cashier, Manager
Preconditions	User has an open cash drawer session (if cash drawer control is enabled).

Fields and validation

Field	Type	Required	Validation / notes
Customer	Search / quick add	No	Walk-in customer if empty; required for credit sales
Items	Scan / search	Yes	At least one line
Qty	Number	Yes	≤ available stock (IMEI lines fixed at 1)
Line / invoice discount	Amount or %	No	Within role limit or approved
Salesperson	Select	Yes	Defaults to logged-in user
Payments	Method + amount	Yes	Total paid ≥ total, except credit sale
Note	Text	No	Printed on invoice if chosen

Process flow

1. Cashier scans barcode or IMEI, or searches by name.
2. System adds the line with price and tax; for phones, prompts for IMEI if a model barcode was scanned.
3. Cashier applies discounts; if over limit, System asks for manager PIN or sends a remote approval request.
4. Cashier selects customer (optional), then Pay.
5. Cashier enters one or more payments; System shows change due.
6. On Complete, System saves invoice, reduces stock, updates drawer and ledgers, awards loyalty points, calculates commission.
7. System prints receipt/invoice and, if enabled, sends it by SMS or email.

Business rules

- Invoice number: branch prefix + running number, never reused.
- Hold sale saves a draft cart; drafts older than 24 hours are auto-cleared and reservations released.
- Voiding a completed invoice needs the Void permission and a reason; stock and payments are reversed.
- Price override below cost needs the Override price permission.
- Printed invoice shows shop details, IMEIs, warranty period and warranty terms.

Acceptance criteria

- A 3-item cash sale can be completed in under 30 seconds with a scanner.

- If the connection drops during save, the cart is kept and the save retries without creating duplicates (idempotency key).

F-10 Returns, exchanges, trade-ins and wholesale

Item	Detail
SRS reference	POS-07, POS-08, POS-10
Purpose	Handles money and stock going back to the customer, and devices coming in.
Actors	Cashier (request), Manager (approve)
Preconditions	Starter plan or above for returns and wholesale.

Fields and validation

Field	Type	Required	Validation / notes
Original invoice	Search	Returns	Must be within return window
Items and IMEI's returned	Select	Yes	Only items on the original invoice
Reason / restock condition	Select	Yes	Resellable, Damaged, To supplier
Refund method	Select	Yes	Original, Cash, Store credit
Trade-in device model / IMEI / condition / value	Mixed	Trade-in	IMEI Luhn check; value ≤ manager limit

Process flow

1. Return: user finds invoice, selects items, reason, and refund method; manager approves; System issues a credit note and restocks.
2. Exchange: return plus new sale in one transaction; the customer pays or receives the difference.
3. Trade-in: during a sale, user adds a trade-in line; its value reduces the total and the device enters stock as Used at that cost.
4. Wholesale: user chooses a wholesale customer; System applies wholesale prices and allows credit terms.

Business rules

- Default return window is 7 days (configurable).
- Commission and loyalty points from returned items are reversed.
- Trade-in records keep seller ID number for traceability where legally required.

Acceptance criteria

- A returned IMEI goes back to In stock (or Written off/To supplier by chosen condition).

F-11 Credit sales and installment plans

Item	Detail
SRS reference	POS-09, CRM-03 to CRM-05
Purpose	Allows selling on credit and collecting in parts.
Actors	Manager, Cashier, Accountant
Preconditions	Customer has a profile; Starter plan or above.

Fields and validation

Field	Type	Required	Validation / notes
Credit limit	Money	No	Set per customer; 0 = no credit
Down payment	Money	Installments	≥ 0
Number of installments / frequency	Integer / Select	Installments	1–36; weekly or monthly
First due date	Date	Yes	$\geq$ today

Process flow

1. At payment, user selects Credit or Installment plan.
2. System checks credit limit and overdue balance; blocks or requests approval if exceeded.
3. System creates the schedule and prints it with the invoice.
4. Collections are recorded from Customers > Receive payment, applied to oldest due first.

Business rules

- SMS reminders: 2 days before due, on due date, and 3 days after if unpaid.
- Aging buckets: Current, 1–30, 31–60, 61–90, 90+ days.

Acceptance criteria

- Due tracking screen lists all overdue installments with customer phone and click-to-call.

F-12 Repair management

Item	Detail
SRS reference	REP-01 to REP-11
Purpose	Runs repair jobs from intake to delivery.

Item	Detail
Actors	Front desk, Technician, Manager, End customer
Preconditions	Starter plan or above.

Fields and validation

Field	Type	Required	Validation / notes
Customer	Search / quick add	Yes	Phone required
Device brand / model / IMEI or serial	Mixed	Yes	IMEI Luhn check if entered
Reported faults	Multi-select + text	Yes	From fault list
Accessories received / condition notes	Text	No	—
Photos	Images	No	Up to 6, max 5 MB each
Passcode / pattern	Text	No	Stored encrypted, visible to assigned technician only
Estimated cost / advance	Money	No	Advance ≤ estimate
Promised date	Date-time	Yes	≥ now
Technician	Select	No	Active technician at branch

Process flow

1. Front desk creates the ticket; System prints job card and customer receipt with QR code and sends an SMS with the status link.
2. Manager or front desk assigns a technician (workload shown).
3. Technician moves the job through stages, adds notes and adds parts used from stock.
4. If cost exceeds estimate, job goes to Awaiting approval and the customer is contacted; approval is recorded.
5. When Ready for pickup, System notifies the customer.
6. At pickup, front desk generates the repair invoice (parts + labour – advance), takes payment and marks Delivered.

Business rules

- Default stages: Received → Diagnosing → Awaiting approval → Awaiting parts → In progress → Ready for pickup → Delivered; or Cancelled / Unrepairable (Returned to customer).
- Parts are deducted from stock when added to the job and returned to stock if removed before delivery.
- Repair warranty starts on delivery; a warranty job links to the original and is free unless changed by a manager.
- Tickets past the promised date are flagged Overdue.
- Public status page shows ticket number, device, current stage and expected date only.

Acceptance criteria

- Every stage change is stored with user and time.
- Job profit = invoice total – parts cost – technician commission.

F-13 Customers and loyalty

Item	Detail
SRS reference	CRM-01, CRM-02, CRM-06, CRM-07
Purpose	Keeps customer records and rewards repeat buyers.
Actors	Cashier, Manager, Owner
Preconditions	—

Fields and validation

Field	Type	Required	Validation / notes
Name / phone	Text	Yes	Phone unique within tenant
Email / address / ID number / birthday	Text	No	Valid formats
Type	Select	Yes	Retail or Wholesale
Marketing consent	Checkbox	No	Required before promotional SMS

Process flow

1. Customer profile shows sales, repairs, owned devices by IMEI, payments, balance and loyalty points.
2. Owner configures loyalty: points earned per currency amount, value per point, minimum redemption, expiry months, excluded categories.
3. At checkout, cashier redeems points as a payment method.

Business rules

- Points are earned on paid amount after discounts, not on credit until paid.
- Points expire on a rolling basis; expiry notice by SMS 7 days before.

Acceptance criteria

- Duplicate phone number on create shows the existing customer instead.

F-14 Cash drawer, banking and finance

Item	Detail
SRS reference	FIN-01 to FIN-07
Purpose	Controls cash and records money in and out.
Actors	Cashier, Manager, Accountant
Preconditions	Bank accounts and expense categories set up.

Fields and validation

Field	Type	Required	Validation / notes
Opening float	Money	Yes	≥ 0
Cash in / out	Money + reason	Yes	Reason required
Counted cash	Money + denominations	Yes at close	≥ 0
Cheque no. / bank / amount / date / party	Mixed	Cheques	Date required; no. unique per bank
Expense category / amount / payee / receipt	Mixed	Expenses	Attachment optional

Process flow

1. Cashier opens a drawer session with an opening float.
2. Cash sales, refunds and pay-ins/outs update expected cash automatically.
3. At close, cashier counts cash; System shows variance and prints the Z-report.
4. Manager transfers cash to bank (deposit) or safe.
5. Accountant records expenses, other income, cheques and bank transfers; reconciles bank statements.

Business rules

- Variance over the configured tolerance requires manager sign-off.

- Cheque status: Pending → Deposited → Cleared or Bounced; a bounced customer cheque re-opens the customer balance.
- All postings are double-entry to the internal ledger so reports balance.

Acceptance criteria

- Day-end report matches the sum of all closed drawer sessions for the branch.

F-15 Staff commissions, attendance and payroll

Item	Detail
SRS reference	HR-02 to HR-05
Purpose	Pays staff correctly and motivates sales.
Actors	Owner, Manager, Accountant, Staff
Preconditions	Staff users exist with salary details.

Fields and validation

Field	Type	Required	Validation / notes
Commission rule	Scope + fixed/%	No	Scope: staff, product, category, repairs, services
Shift	Date + start/end + branch	No	—
Clock in / out	Button	No	From user's own login
Salary advance	Money + date	No	≤ configured maximum
Allowances / deductions	Money	No	—

Process flow

1. System calculates commission on each completed sale or delivered repair.
2. Staff clock in/out; managers edit attendance with a reason.
3. Accountant runs payroll for a month: basic + commissions + allowances – deductions – advances.
4. System generates payslips (PDF) and a payroll summary, and records the salary expense.

Business rules

- Commission is based on profit or sales value as configured; reversed on returns.

- A payroll run can be edited while Draft; once Approved it is locked.

Acceptance criteria

- Staff can view their own commission earned this month if permitted.

F-16 Branches and stock transfers

Item	Detail
SRS reference	BR-01 to BR-05
Purpose	Runs several shops under one account.
Actors	Owner, Branch managers
Preconditions	Plan allows more than one branch.

Fields and validation

Field	Type	Required	Validation / notes
Branch name / address / phone / logo	Mixed	Name required	Count $\leq$ plan limit
Invoice prefix	Text	Yes	Unique per tenant
Transfer: from / to / items / IMEIs	Mixed	Yes	From $\neq$ To; stock available

Process flow

1. Receiving branch creates a transfer request, or sending branch creates a direct transfer.
2. Sending manager approves and dispatches; items become In transit.
3. Receiving branch confirms receipt by scanning; differences are recorded.

Business rules

- Transfer status: Requested $\rightarrow$ Approved $\rightarrow$ Dispatched $\rightarrow$ Received (or Partially received / Rejected).
- In-transit stock is counted in neither branch's sellable stock but in total valuation.

Acceptance criteria

- Adding a branch beyond the plan limit shows an upgrade prompt.

F-17 Reports

Item	Detail
SRS reference	RPT-01 to RPT-10

Item	Detail
Purpose	Provides business information for decisions.
Actors	Owner, Manager, Accountant (by permission)
Preconditions	—

Fields and validation

Field	Type	Required	Validation / notes
Report	Select	Yes	Available by plan and permission
Branch / date range / filters	Mixed	Yes	Range ≤ 24 months per run

Process flow

1. User selects a report and filters; System displays table and chart.
2. User exports to PDF or Excel, or prints.
3. Large exports run in the background; the user is notified with a download link.

Business rules

- Report list: Sales summary, Sales by product/category/brand/staff/branch/payment, Profit by item/repair/staff/branch, Stock valuation, Stock aging, Dead stock, Movement, IMEI register, Low stock, Purchases, Supplier balances, Customer balances and aging, Top customers, Loyalty, Repair turnaround, Technician productivity, Repair profit, Cash drawer/Z-report, Day-end, Expenses, Profit & Loss, Cash flow, Tax summary, Commission, Payroll, Audit log.
- Lite plan: Sales summary, Stock list, Low stock, Purchases, Customer and Supplier lists only.
- Cost and profit columns are hidden without the view-margin permission.

Acceptance criteria

- Report totals equal the underlying transactions for the same filters.

F-18 Notifications and integrations

Item	Detail
SRS reference	INT-01 to INT-07
Purpose	Connects Cellivo to customers and outside systems.
Actors	Owner, System
Preconditions	SMS credits available for SMS; WooCommerce keys for sync.

Fields and validation

Field	Type	Required	Validation / notes
SMS/email template	Text with merge fields	Yes	Fields: {customer}, {shop}, {invoice_no}, {amount}, {ticket_no}, {status}, {link}, {due_date}
WooCommerce URL / consumer key / secret	Text	Sync	Connection test must pass
Sync options	Toggles	No	Products, stock, orders; direction

Process flow

1. Events trigger notifications per the notification matrix (Appendix B).
2. SMS is queued, sent via the gateway and marked Delivered/Failed from delivery reports.
3. WooCommerce: stock changes push to the store within 1 minute; online orders import as invoices marked Online.

Business rules

- SMS is not sent if the shop has zero credits; the owner is alerted at 10% remaining.
- Promotional SMS only to customers with marketing consent.

Acceptance criteria

- Failed notifications are listed with reason and a Resend button.

F-19 Shop settings

Item	Detail
SRS reference	SET-01 to SET-06
Purpose	Configures the shop.
Actors	Owner
Preconditions	—

Fields and validation

Field	Type	Required	Validation / notes
Business profile	Mixed	Name required	Logo PNG/JPG $\leq$ 2 MB

Field	Type	Required	Validation / notes
Tax rates	Name + %	No	0–100
Invoice template / receipt width	Select	Yes	Thermal 58/80 mm, A4, A5
Warranty and return terms	Text	No	≤ 1,000 characters
Master lists	Lists	—	Categories, brands, models, faults, stages, expense categories, payment methods
Security options	Toggles	—	2FA enforcement, IP lock, device control, idle timeout

Process flow

1. Owner edits a setting and saves; changes apply immediately and are logged.
2. Backups tab lists daily backups; owner can request a restore, which the system performs after confirmation.

Business rules

- Restoring overwrites current data; System takes a fresh backup first.

Acceptance criteria

- All settings changes appear in the audit log with before/after values.

4 Platform admin dashboard

Internal back office for Cellivo staff at a separate address (e.g. admin.cellivo.com), protected by mandatory 2FA and an IP allow-list. Navigation: Overview, Tenants, Plans, Payments, Coupons, SMS credits, Leads, Affiliates, Website, Support, Announcements, Admin users, Audit log, System.

ID	Function	Behaviour	Acceptance
A-01	Admin overview	Platform KPIs (tenants by status, sign-ups, trial conversion), revenue KPIs (MRR, ARR, lifetime revenue, ARPU, churn, failed payments) and trend charts.	Figures reconcile with the payments ledger.
A-02	Tenant list and profile	Search/filter all tenants; profile shows owner, plan, term, renewal date, branches used, users, usage (invoices, IMEIs, SMS, storage), last activity, payments, tickets, internal notes.	Admin can find any tenant by email, phone, shop name or tenant ID.
A-03	Tenant actions	Suspend, reactivate, extend trial, change plan or term, grant free period, override branch limit, reset owner password/2FA, archive, delete. Each needs a reason and is audit-logged; destructive actions need a second Super Admin confirmation.	Tenant is notified by email of suspension, reactivation and plan changes.
A-04	Support access	"Log in as tenant" in read-only mode by default; write mode only with a linked support ticket. A banner is shown and the tenant's audit log records the session.	Session auto-ends after 30 minutes.
A-05	Plans and features	Create/edit plans: code, name, prices per term and currency, branch/user limits, module flags, trial length, visibility on pricing page. Price changes apply to new subscriptions and renewals only.	Pricing page updates without a code release.
A-06	Payments and invoices	List payments, invoices, refunds and failed charges; issue refunds; record offline bank-transfer payments; resend invoices; export for accounting.	Refund updates tenant billing history and gateway.
A-07	Coupons	Code, % or fixed value, valid dates, max uses, per-tenant limit, eligible plans and terms.	Expired coupons cannot be applied.
A-08	SMS credits	Define credit packages, top up a tenant manually, view usage and gateway cost per tenant, set low-balance thresholds.	Credits cannot go negative.

ID	Function	Behaviour	Acceptance
A-09	Leads and demos	Contact and demo requests with status (New, Contacted, Demo scheduled, Demo done, Converted, Lost), assignee, notes, follow-up date; conversion links a lead to a tenant.	New leads notify the sales team by email.
A-10	Affiliates	Approve affiliates, set commission %, view referred tenants and paid conversions, record payouts, affiliate statements.	Commission is only earned on paid, non-refunded invoices.
A-11	Website CMS	Blog posts (draft, scheduled, published), categories, customer logos, testimonials, FAQs, legal pages with versions, SEO meta per page, redirects, sitemap.	Published changes are live within 5 minutes.
A-12	Support tickets	Tickets from support centre, email or in-app; priority, SLA timer (faster for paid plans), assignment, internal notes, canned replies.	SLA breaches are highlighted.
A-13	Announcements and emails	In-app announcements to all or filtered tenants with dates; edit system email templates.	Tenants see announcements on their dashboard until dismissed or expired.
A-14	Admin users and audit	Admin roles: Super Admin, Support, Sales, Finance, Content Editor, each with fixed permissions; mandatory 2FA; searchable audit log of all admin actions.	Only Super Admin can manage admins and delete tenants.
A-15	System health	Uptime, API error rate, response times, job queues, SMS/email failures, backup status, storage per tenant, recent deployments; maintenance window scheduling; feature flags per tenant or global.	Alert emails go to on-call staff when thresholds are breached.
A-16	Global catalogue	Shared phone brand/model catalogue tenants can import from.	Updates never overwrite a tenant's own edits.

4.1 Admin role permissions

Area	Super Admin	Support	Sales	Finance	Content
Overview KPIs	Full	View	View	Full	None
Tenants	Full	View, support actions	View	View	None

Area	Super Admin	Support	Sales	Finance	Content
Plans and coupons	Full	None	View	Full	None
Payments and refunds	Full	View	None	Full	None
Leads and affiliates	Full	None	Full	Payouts	None
Website CMS	Full	None	None	None	Full
Support tickets	Full	Full	View	None	None
Admin users, system	Full	None	None	None	None

5 Status models

Record	Statuses and allowed changes
Subscription	Trial → Active → Past due → Suspended → Cancelled → Archived; Trial → Expired; any → Active on payment
Sales invoice	Draft (held) → Completed → Partially returned / Returned; Completed → Voided (permission + reason)
Payment status	Unpaid → Partially paid → Paid; Overdue when past due date
IMEI item	In stock ↔ Reserved; In stock → In transit → In stock; In stock → Sold → Returned → In stock; In stock → Returned to supplier / Written off; Sold → In repair → Sold
Purchase order	Draft → Sent → Partially received → Received → Closed; Draft/Sent → Cancelled
Repair ticket	Received → Diagnosing → Awaiting approval → Awaiting parts → In progress → Ready for pickup → Delivered; any before Delivered → Cancelled / Unrepairable
Stock transfer	Requested → Approved → Dispatched → Received / Partially received; Requested → Rejected
Cheque	Pending → Deposited → Cleared / Bounced; Pending → Cancelled
Cash drawer session	Open → Closed → Approved (if variance over tolerance)
Payroll run	Draft → Approved → Paid
Lead	New → Contacted → Demo scheduled → Demo done → Converted / Lost

6 Validation and system messages

Messages state what happened and how to fix it. Field errors appear under the field; system errors appear as a banner.

Code	Situation	Message
V-01	Required field empty	Enter {field}.
V-02	Invalid IMEI	This IMEI is not valid. Check the 15 digits and scan again.
V-03	IMEI already sold	IMEI {imei} was sold on invoice {no}. Choose another unit or process a return first.
V-04	Duplicate IMEI at GRN	IMEI {imei} is already in stock at {branch}.
V-05	Stock not available	Only {qty} left at this branch. Reduce the quantity or transfer stock.
V-06	Discount over limit	This discount is above your limit. Ask a manager to approve.
V-07	Credit limit exceeded	{customer} would go over their credit limit by {amount}. Take a payment or ask a manager to approve.
V-08	Payment short	Payments are {amount} short of the total.
V-09	Plan limit	Your plan allows {n} branches. Upgrade to add more.
V-10	Feature not in plan	Repairs are available from the Starter plan. Upgrade to use them.
V-11	Suspended tenant	Your subscription is unpaid. Pay now to continue billing. You can still view and export data.
V-12	No SMS credits	SMS not sent: no credits left. Buy credits in Settings > Subscription.
V-13	Connection lost	You're offline. Your cart is saved and will be sent when the connection returns.

7 UI design

This section defines the look and behaviour of every screen so that the shop application, the account portal and the admin dashboard match the client's live Cellivo design. The design language was taken from the client's account portal (account.cellivo.com): colours were sampled directly from the supplied screenshot, and the font, shapes and components were matched to it. Sample data in the screens is illustrative.

7.1 Design system

Colour tokens

Token	Value	Used for
Page background	 #F5F7FB	App and portal page background
Surface / card	 #FFFFFF	Cards, tables, inputs, sidebar
Card border	 #E9EDF5	1 px border on cards and dividers
Brand blue (logo)	 #3454D1	Logo, links, active menu text, selected tab text
Primary action	 #445EE4	Primary buttons, chart revenue series, progress, active menu icon
Primary hover	 #3A51CF	Primary button hover / pressed
Avatar gradient	 #556DEC → #6478EE	User initial avatar
Tint (selected)	 #EEF2FF	Active menu item, selected tab, info pill background
Hero navy start	 #142040	Hero card gradient 0%
Hero navy middle	 #1C2954	Hero card gradient 45%
Hero navy end	 #39488D	Hero card gradient 100%
Glass tile	rgba(255,255,255,0.07) + border 0.13	Panels inside hero cards
Affiliate gradient	 #232C44 → #2B3A8F → #156673	Affiliate rewards banner
Heading text	 #101828	Headings and values
Body text	 #344054	Form labels, body copy

Token	Value	Used for
Secondary text	 #5E6B85	Captions and helper text
Label text	 #667085	Uppercase card labels and table headers
Placeholder / muted	 #98A2B3	Placeholders, section labels, inactive icons
Success	 #12A150 on #E7F8EE	Paid, In stock, positive change
Warning	 #A15C00 on #FFF4DB	Low stock, past due, partially paid
Danger	 #C4282D on #FDECEC	Out of stock, overdue, failed, suspend
Profit series	 #2BB3A0	Chart profit / secondary series

Typography

Element	Specification
Font family	Plus Jakarta Sans (Google Fonts); fallback Inter, Segoe UI, Arial, sans-serif
Hero title	34 px, weight 800, letter-spacing -0.03em, white
Page title	21 px, weight 700, -0.02em; small context line above at 12 px / 500 / #667085
Section / card title	15 px, weight 700
Stat value	25 px, weight 700, -0.02em, #101828
Hero sub-heading	17 px, weight 700; secondary part weight 500 at 75% white
Body	14 px, weight 400–500, line-height 1.5
Uppercase label	11.5 px, weight 700, letter-spacing 0.08em, #667085 (on dark: 72% white)
Badge text	11 px, weight 800, letter-spacing 0.06em, uppercase
Button text	13–14 px, weight 700
Caption / helper	12.5–13 px, weight 400, #5E6B85
Numbers	Tabular figures for money columns; currency code before amount (LKR 0.00, Rs 1,245,000)

Shape, spacing and elevation

Element	Specification
Hero card	Radius 24 px (portal 28 px); padding 32 × 34 px; shadow 0 18px 40px rgba(20,32,64,0.18)
Card	Radius 18 px; padding 18–20 px; border 1 px #E9EDF5; shadow 0 1px 2px rgba(16,24,40,0.04)
Glass tile	Radius 16 px; padding 16 px; 7% white fill; 13% white border
Input	Radius 12 px; padding 10 × 14 px; border #E4E8F0; focus ring 3 px rgba(68,94,228,0.35)
Button / pill / badge	Fully rounded (999 px). Primary: padding 12 × 20 px, shadow 0 6px 16px rgba(68,94,228,0.28)
Avatar	40 × 40 px, radius 12 px, white initial, weight 700
Spacing scale	4-point scale; common gaps 8, 10, 12, 16, 18, 22, 28 px
Layout width	Portal content max 1,120 px centred; app content fluid beside a 228 px sidebar
Header	Height 68–72 px, 1 px bottom border #EDF0F6; logo left, Support pill right

Components

Component	Specification
Primary button	Blue #445EE4 fill, white text, pill shape, soft blue shadow. One per area (e.g. Create your workspace, New Sale, Pay).
Secondary button (light)	White fill, 1 px #E4E8F0 border, dark text (e.g. Support, Export, Hold).
Secondary button (on dark)	Transparent, 1 px 35% white border, white text (e.g. Contact sales, New Repair on hero).
Badge on dark	Pill with 6% white fill and 20% white border, uppercase 11 px extra-bold (ACCOUNT READY).
Status chip	Pill with tinted background and matching dark text: green, amber, red, blue, grey.
Stat card	White card; uppercase label; large value; one-line helper under it. Four per row on desktop.
Hero card	Navy gradient; left: badge, title, sub-heading, description, two buttons; right: glass tiles.
Progress bar	7 px high, radius 4 px, 14% white track on dark, fill #8FA2FF; label left and status right above it.

Component	Specification
Sidebar menu	White; 228 px; items 14 px/500 with 16 px icon; active item #EEF2FF background, #3454D1 text/700; uppercase group labels.
Tabs	Pill tabs; active tab tinted #EEF2FF with blue text.
Tables	Uppercase 11 px grey headers, 1 px light row dividers, no vertical lines; right-align money.
Overflow menu (⋮)	34 px white circle with light shadow; opens a menu card under it.
Kanban column	#EEF1F7 column, radius 16 px; white ticket cards radius 14 px.

Interaction states

State	Behaviour
Hover	Primary darkens to #3A51CF; light buttons get #F9FAFB fill; cards raise shadow slightly; table row #F9FAFB.
Focus (keyboard)	3 px ring rgba(68,94,228,0.35) outside the element; never removed.
Disabled	45% opacity, no shadow, cursor not-allowed; tooltip explains why (e.g. plan limit).
Loading	Skeleton blocks in #EEF1F7 with shimmer for cards and table rows; buttons show a spinner and keep width.
Empty	Short message, one helpful action (e.g. "No invoices yet" with "Choose a plan").
Error	Red text under the field with #C4282D; banner for page-level errors.

Responsive behaviour

Screen width	Layout
≥ 1200 px (desktop)	Sidebar visible; four stat cards per row; hero two columns.
768–1199 px (tablet)	Sidebar collapses to icons; two stat cards per row; hero right panel moves under the left content; POS cart becomes a slide-up panel.
< 768 px (phone)	Bottom tab bar (Home, Sale, Stock, Repairs, More); one card per row; buttons full width; tables become stacked cards; hero title 26 px.

Accessibility: text contrast meets WCAG 2.1 AA (white on #445EE4 ≈ 4.9:1; #667085 on white ≈ 4.8:1); all actions reachable by keyboard; visible focus ring; icons have text labels or accessible names; status is never shown by colour alone (chips carry text).

7.2 Account portal home page (account.cellivo.com)

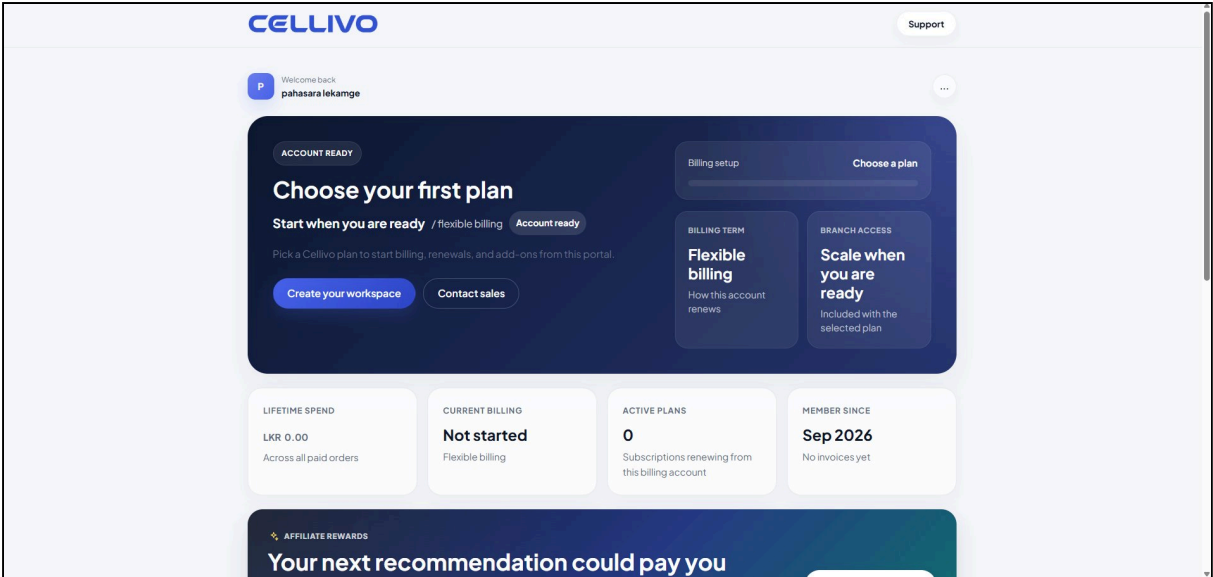

Figure 7.1. Reference: client's current account portal home (screenshot supplied by the client, new account state).

Item	Detail
Function ID	F-20 Account portal home
SRS reference	ACC-11 to ACC-18
Purpose	First page the shop owner sees after logging in to the account portal; shows account and billing status and the next step.
Actors	Shop owner (billing account holder)
Preconditions	Owner is logged in to account.cellivo.com.

Element-by-element specification (numbered top to bottom, left to right)

#	Element	Content on screen	Style	Data and behaviour
1	Header bar	CELLIVO logo (left), "Support" button (right)	Logo: blue #3454D1 wordmark, ~26 px high. Support: white pill with soft shadow.	Logo links to portal home. Support opens support.cellivo.com (or chat). Header stays at top.

#	Element	Content on screen	Style	Data and behaviour
2	Welcome block	Avatar with initial "P"; "Welcome back"; full name "pahasara lekamge"	Avatar 40 px blue gradient, radius 12. Small grey line 12 px; name 14 px bold.	Initial and name from the owner's profile. Name should show as entered, with first letters capitalised.
3	Overflow menu	"..." round button (right)	34 px white circle, light shadow	Opens: Profile, Billing details, Invoices, Payment methods, Security (password, 2FA), Log out.
4	Hero card	Navy gradient card	Radius 28 px, gradient #142040 → #1C2954 → #39488D	Main status area. Content changes by account state (see states table).
5	Status badge	"ACCOUNT READY"	Pill on dark, uppercase 11 px extra-bold	Shows account state: ACCOUNT READY, TRIAL, SUBSCRIPTION ACTIVE, PAST DUE, SUSPENDED.
6	Hero title	"Choose your first plan"	34 px, weight 800, white	Main instruction for the current state.
7	Sub-heading	"Start when you are ready" + "/" flexible billing"	17 px bold + lighter secondary part	Shows plan price/term when active (e.g. LKR 12,000 / month).
8	Status chip	"Account ready"	Pill on dark, 12 px	Shows renewal date or state when active.
9	Description	"Pick a Cellivo plan to start billing, renewals, and add-ons from this portal."	14 px, 62% white	Helper text for the state.
10	Primary button	"Create your workspace"	Blue #445EE4 pill with glow	New account: opens plan selection then creates the shop workspace. Active: "Open my shop" opens the shop app.
11	Secondary button	"Contact sales"	Outline pill on dark	Opens contact form / sales email. Active: "Upgrade plan".

#	Element	Content on screen	Style	Data and behaviour
12	Billing setup panel	"Billing setup" (left), "Choose a plan" (right), progress bar	Glass tile, 7 px progress bar	Progress = setup steps done (choose plan → pay → workspace ready). 0% for new account; "Complete" at 100%.
13	Billing term tile	Label "BILLING TERM", value "Flexible billing", caption "How this account renews"	Glass tile; value 20 px extra-bold	Shows Monthly / Yearly / Lifetime and next charge date when active.
14	Branch access tile	Label "BRANCH ACCESS", value "Scale when you are ready", caption "Included with the selected plan"	Glass tile	Shows branches used vs limit (e.g. 2 of 3) when active.
15	Stat card: Lifetime spend	"LIFETIME SPEND" · "LKR 0.00" · "Across all paid orders"	White card; value shown smaller and grey than other cards	Sum of all paid invoices in the account currency.
16	Stat card: Current billing	"CURRENT BILLING" · "Not started" · "Flexible billing"	White card; value 25 px bold	Not started / Trial / Active / Past due / Cancelled + term.
17	Stat card: Active plans	"ACTIVE PLANS" · "0" · "Subscriptions renewing from this billing account"	White card	Count of active subscriptions on this billing account.
18	Stat card: Member since	"MEMBER SINCE" · "Sep 2026" · "No invoices yet"	White card	Month/year of sign-up; caption shows invoice count or last payment.
19	Affiliate banner	"♦ AFFILIATE REWARDS" · "Your next recommendation could pay you" · button	Gradient navy → indigo → teal, radius 24; white pill button on right	Button opens affiliate sign-up or shows the referral link with Copy and Share. Visible to all owners.
20	Page background	—	#F5F7FB	—

Page states

State	Badge	Hero title	Buttons	Billing setup bar	Current billing card
New account (no plan)	ACCOUNT READY	Choose your first plan	Create your workspace / Contact sales	0%, "Choose a plan"	Not started · 0 plans
Free trial	TRIAL · 9 DAYS LEFT	Your trial is running	Open my shop / Choose a plan	66%, "Add payment"	Trial · Starter
Active	SUBSCRIPTION ACTIVE	Growth plan is active	Open my shop / Upgrade plan	100%, "Complete"	Active · 1 plan
Past due	PAYMENT FAILED	Update your payment method	Pay now / Contact support	Amber bar, "Payment needed"	Past due (amber value)
Suspended / cancelled	SUSPENDED or CANCELLED	Your shop is read-only	Reactivate / Export data	Red bar	Suspended / Cancelled

Process flow

1. Owner logs in; System loads profile, subscription, invoices and affiliate status.
2. System decides the page state (new, trial, active, past due, suspended) and fills the hero, tiles and stat cards.
3. Owner clicks the primary button: new account → plan picker → payment → workspace created → billing setup 100%; active → opens the shop app.
4. Owner can open the account menu, contact sales, contact support or open the affiliate programme.

Business rules

- Lifetime spend counts paid invoices only, net of refunds, in the account currency.
- Active plans counts subscriptions with status Trial, Active or Past due.
- Member since uses the account creation date (month and year).
- The affiliate banner is hidden after the owner dismisses it, for 90 days.

Acceptance criteria

- Each of the five states shows the exact badge, title, buttons and bar listed in the page states table.
- Stat card values match the billing records.
- Page matches the design tokens in 7.1 on desktop, tablet and phone widths.

7.3 UX review of the current portal page and recommendations

The current page looks modern and consistent. The points below would make it clearer and more user friendly; they are recommendations for the client to accept or reject.

Area	What we see	Recommendation
Duplicate status	"Account ready" appears twice (badge and chip).	Keep the badge for state; use the chip for a real fact (plan, renewal date, trial days left).
Unclear sub-heading	"Start when you are ready / flexible billing" reads like two labels.	Use one plain line, e.g. "No plan yet · pay monthly, yearly or once".
Heading vs button	Heading says "Choose your first plan" but the button says "Create your workspace".	Match them: button "Choose a plan", or heading "Create your workspace"; the flow opens the plan picker first.
Empty progress bar	Billing setup bar shows 0% with no steps.	Show steps: "Step 1 of 3 · Choose plan" so users know what is left.
Tile text is marketing, not data	"Flexible billing" and "Scale when you are ready" do not tell the user anything about their account.	Show real values or "Not selected yet"; move marketing text to the plan picker.
Caption order	"How this account renews" explains the label, not the value.	Label: BILLING TERM; value: Not selected; caption: "Choose monthly, yearly or lifetime".
Inconsistent stat value	"LKR 0.00" in Lifetime spend is smaller and lighter than other values.	Use the same 25 px bold value style on all four cards.
Name formatting	Name shows in lower case ("pahasara lekamge").	Display names in title case or exactly as the user typed at sign-up.
Unlabelled menu	"..." has no visible label.	Add accessible label "Account menu" and a tooltip.
Member since caption	"No invoices yet" under Member since mixes two ideas.	Caption: "Joined 27 Sep 2026"; keep invoice info in Lifetime spend.
Affiliate banner priority	Large banner competes with the main task for new users.	Show it smaller (or after the first payment) and allow dismiss.
Contrast	Description text at ~62% white on navy is near the limit.	Keep at least 70% white for body text on the hero (WCAG AA).

7.4 Screen designs

All screens below use the design system in 7.1. The shop application adds a white sidebar menu to the same header, card and hero styles used in the portal. UI principles: the most-used action is

always one click away; POS works fully by scanner and keyboard; status chips always include text; large touch targets on tablets; every list has search and filters; destructive actions ask for confirmation.

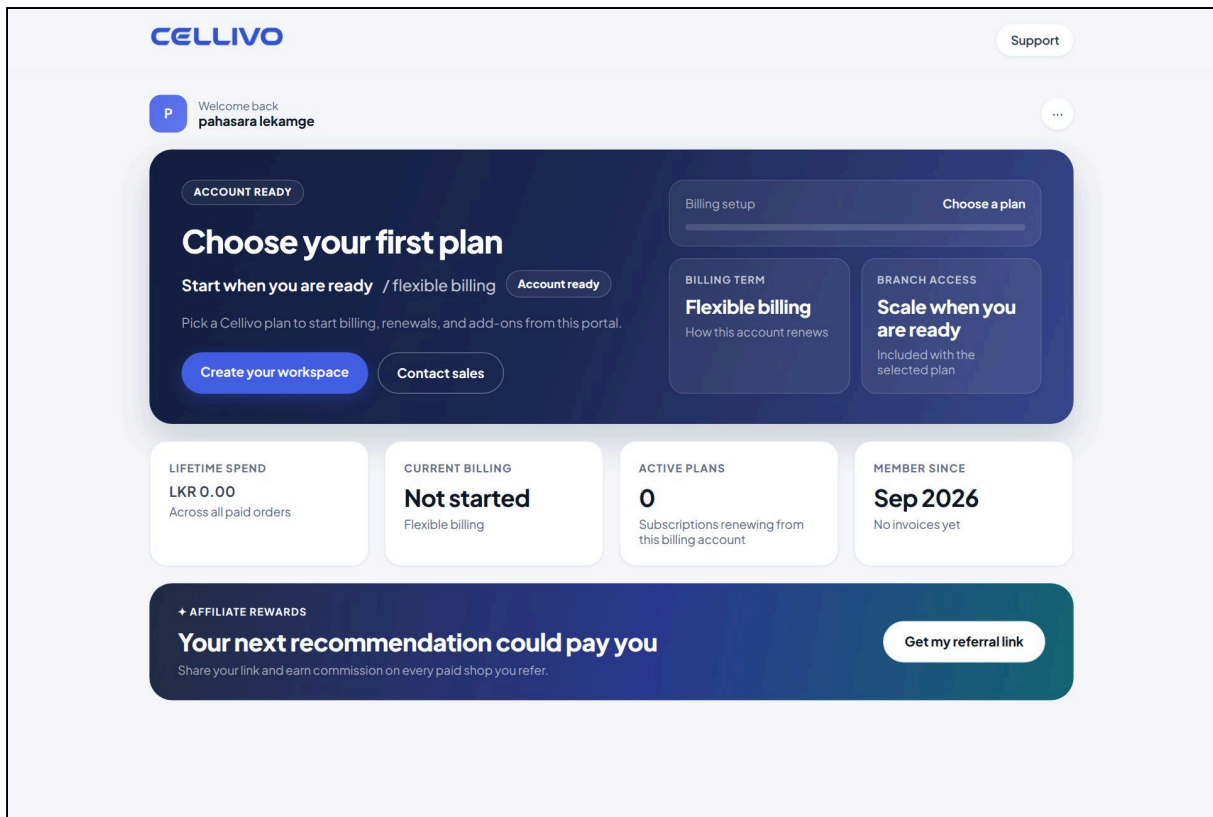

Figure 7.2. Account portal home · new account (no plan) (FRS: F-20). Recreation of the client's account portal home for a new account, following the reference screenshot.

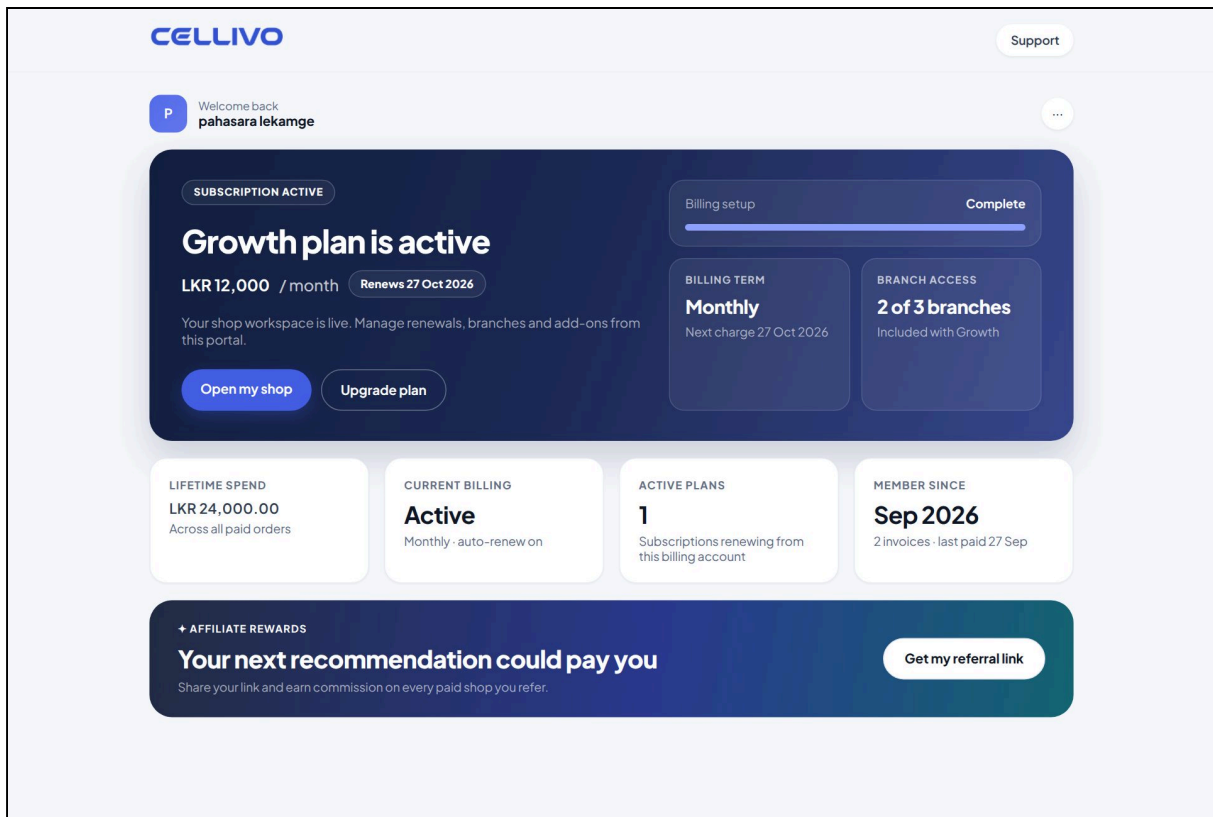

Figure 7.3. Account portal home · active subscription (FRS: F-20). Same page for an active subscription: hero shows plan, price, renewal, progress complete, real branch usage.

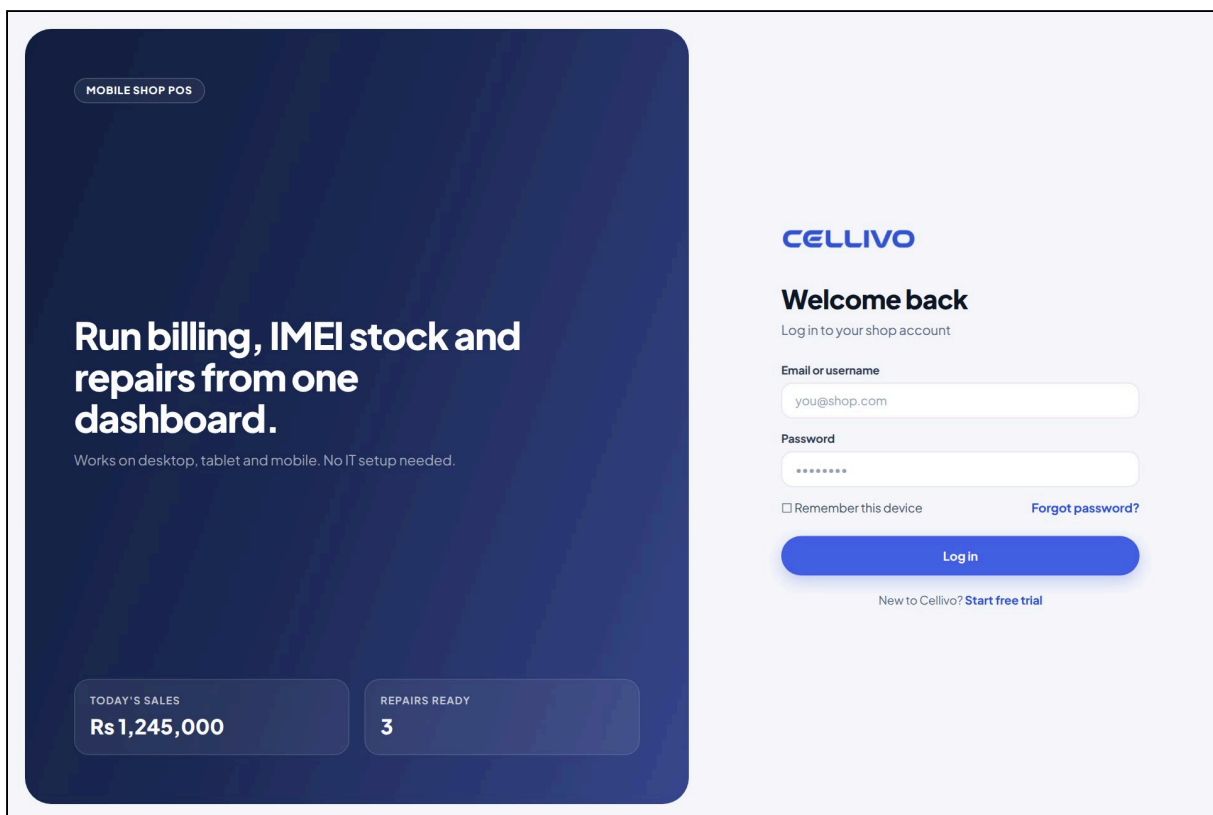

Figure 7.4. Login (FRS: F-03). Split layout with the portal's navy gradient card on the left and a short login form on the right.

Figure 7.5. Sign-up and free trial (FRS: F-01). Portal header, one white card with the selected plan, trial message and form.

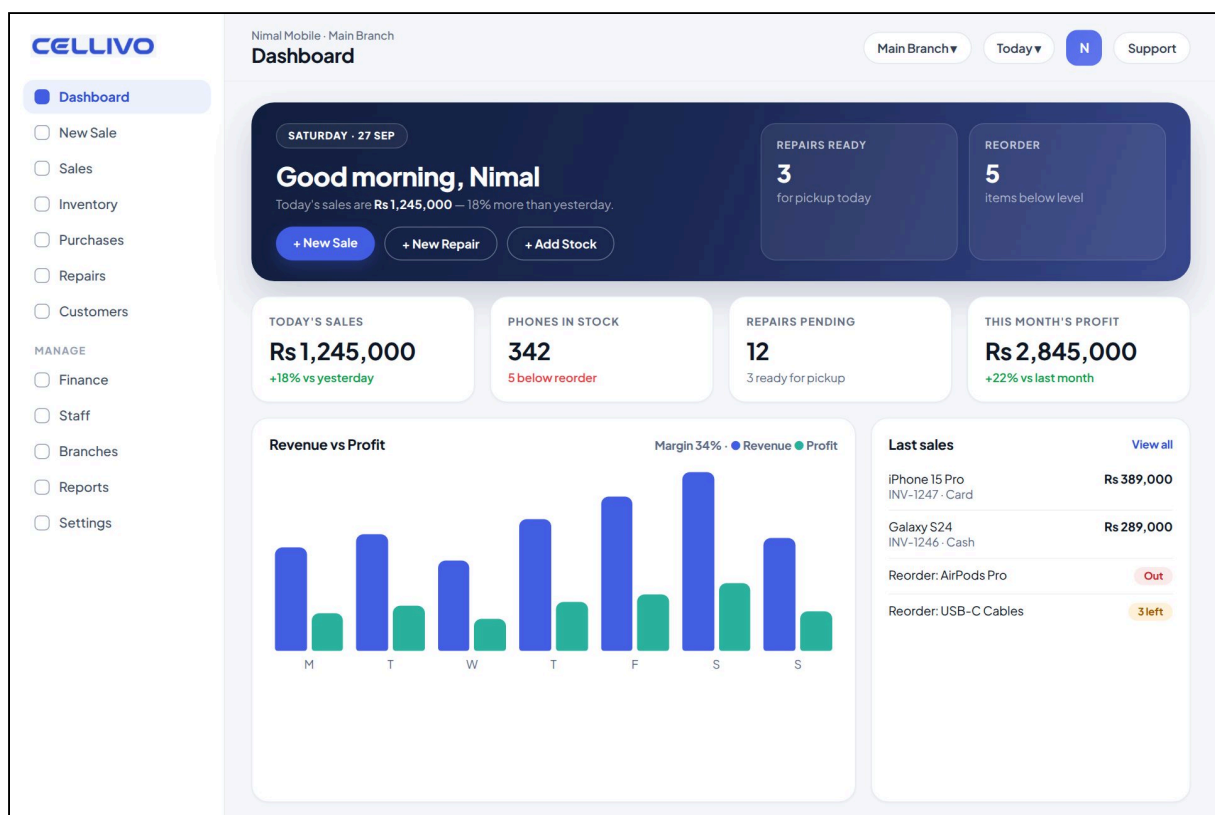

Figure 7.6. Shop dashboard (FRS: F-05). Navy hero greeting with quick actions and glass tiles, four stat cards in the portal style, Revenue vs Profit chart and last sales.

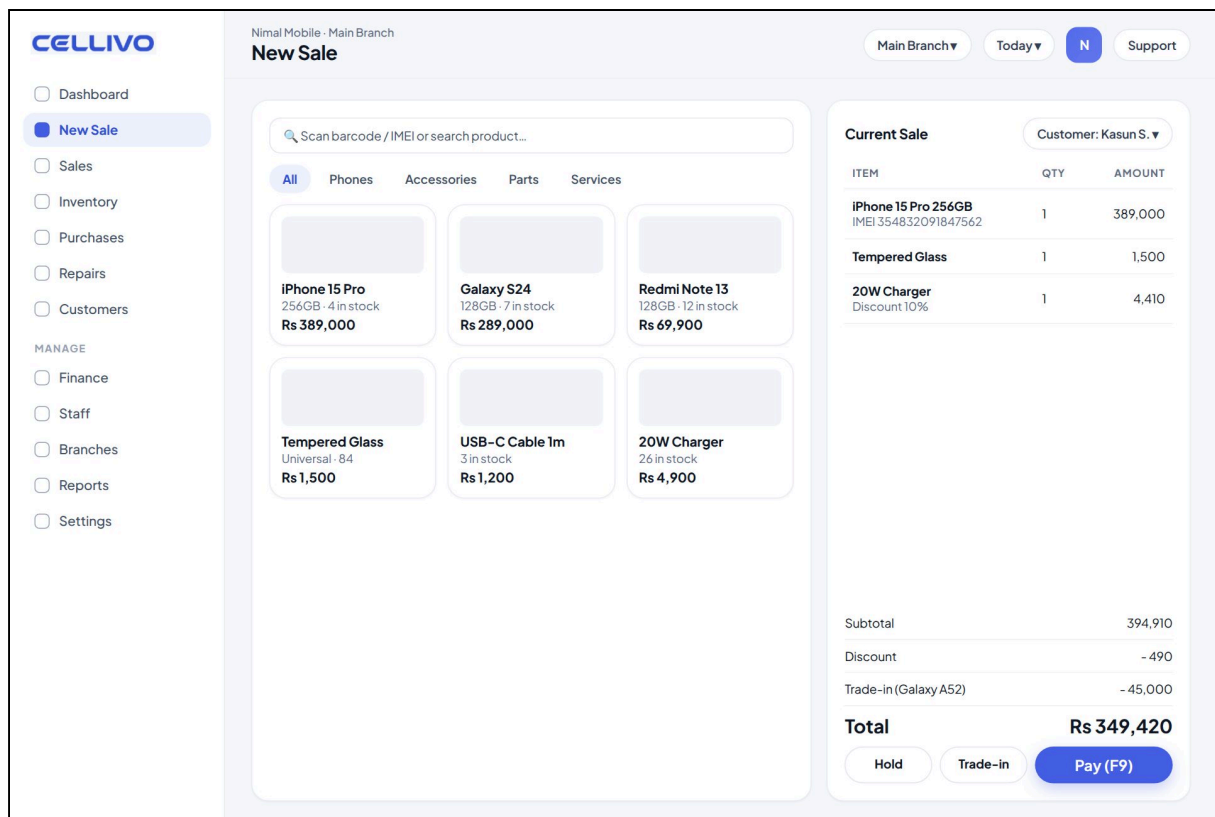

Figure 7.7. POS billing (FRS: F-09, F-10). Scan/search bar, category pill tabs, product tiles, fixed cart with IMEI under each phone, trade-in and a large Pay (F9) button.

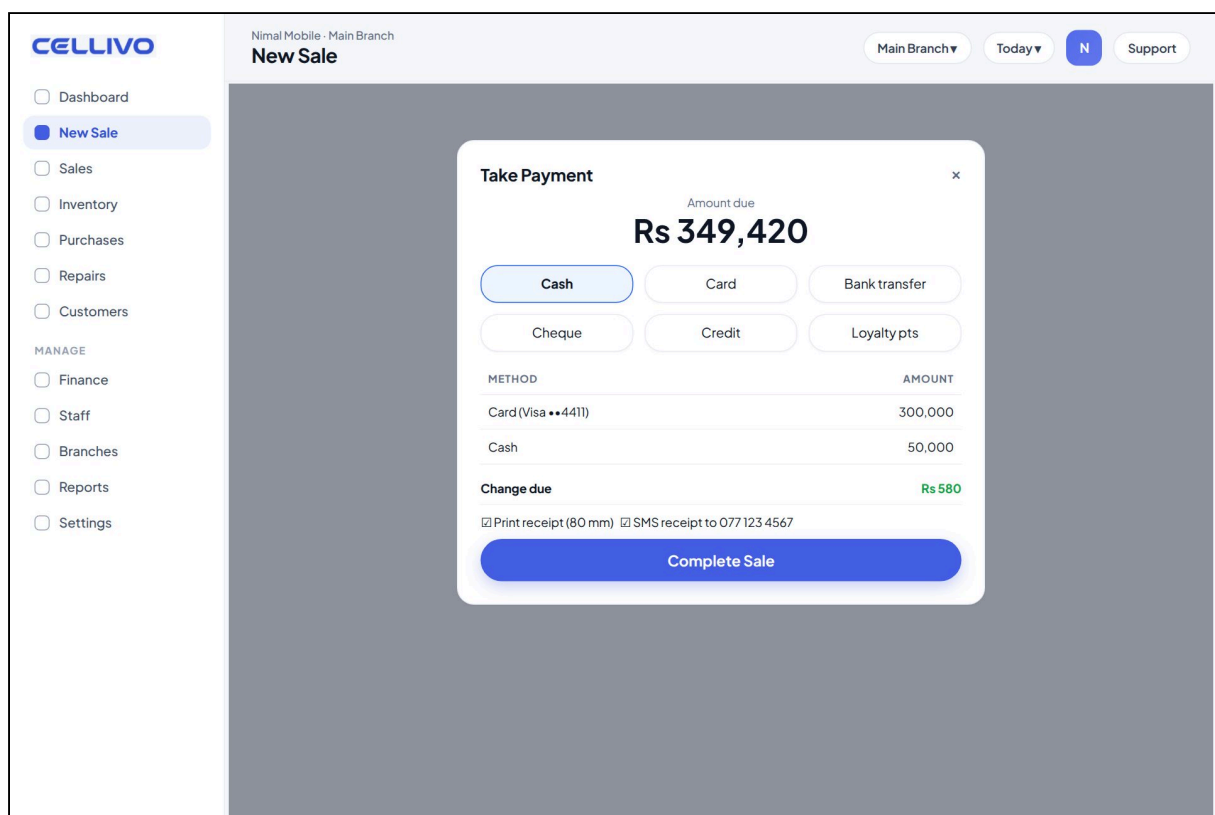

Figure 7.8. Payment (FRS: F-09). Modal with amount due, payment method tiles, split payments, change due and receipt options.

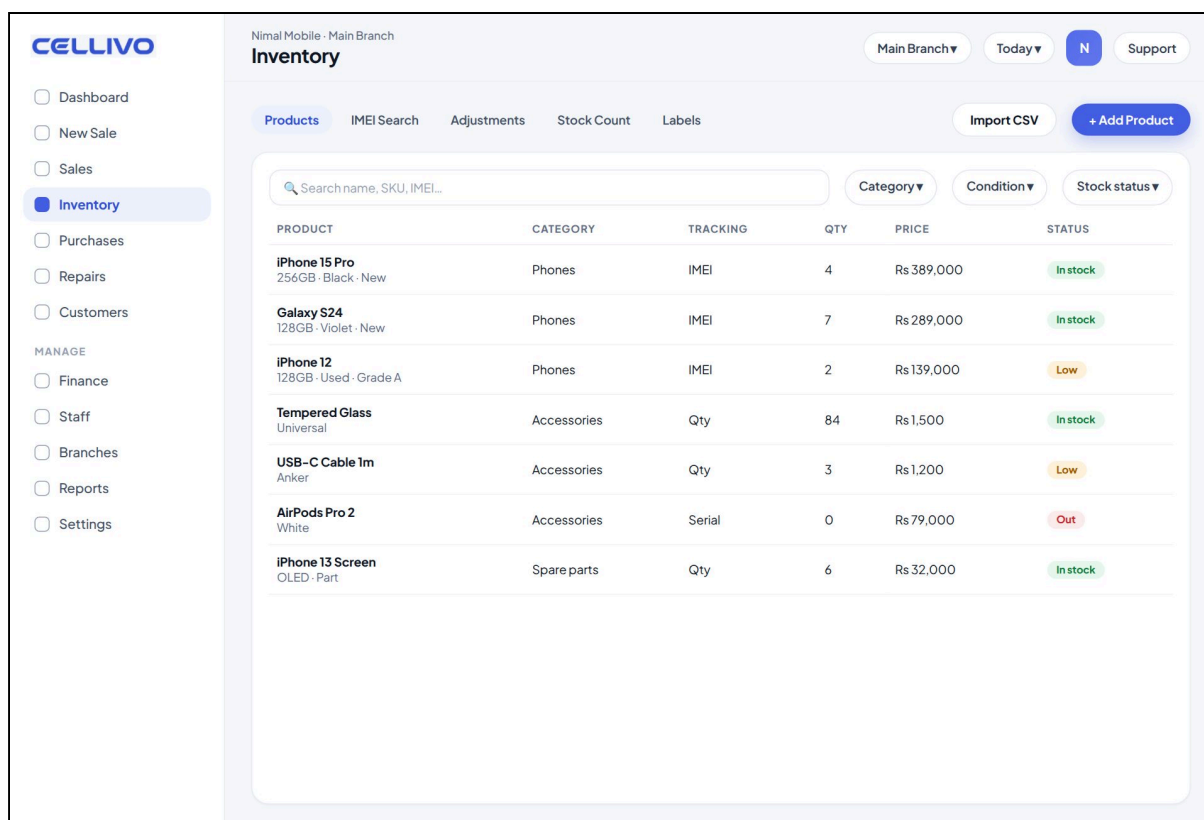

Figure 7.9. Inventory (FRS: F-06). Pill tabs, filters and a product table with colour-coded stock status.

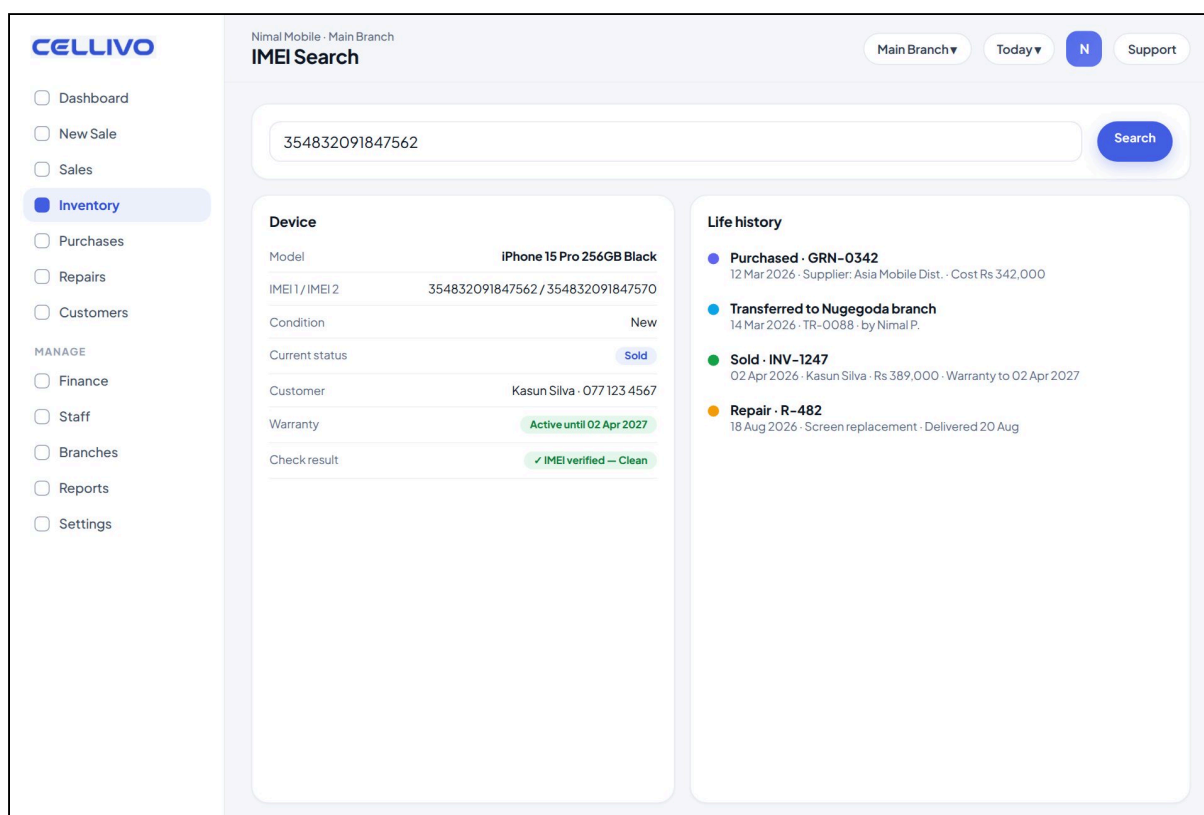

Figure 7.10. IMEI search and history (FRS: F-07). IMEI search, device details with warranty and verification, and life-history timeline.
